

## Webcam updates

We have installed a four port video card by Grandtec into the Weather server. This will allow us to have more webcams online. We have large pond which has interesting wildlife activity so this will have a camera soon. Other views will also be added over time.

So we can use the extra video inputs we have just upgraded our webcam software. For years we used Chillcam but it couldn't hack more than one camera and seems to be no longer supported. We have upgraded to VisionGS which will give us four camera feeds and also the option of live feeds with sound and remote camera control. This will allow the site visitors to control what they see (with a few restrictions!).
